- 23) **SAPONARIA OCYMUS.** Pink flowers. Strong growth. Sun or shade. Soil A.
- 24) **SILENE ALPESTRIS.** White flowers. Sun. Soil A.

The seeds should be sown not too thick in pots or boxes, containing a light sandy soil with good drainage. Cover the seeds slightly. They should be kept moist as evenly as possible, and placed in a cold house or cold frame in January or February. After two or three months, they should be pricked out in boxes, and in May or June planted in their definitive place.

Soil A. Unusual good garden soil for rockgarden.

Soil B. This must be lighter, with some sand.

Soil C. With a good part of leaf soil (Decayed leaves).
